AUTHOR Sitts, Maxine K., Ed.
TITLE The Automation Inventory of Research Libraries, 1986.
INSTITUTION Association of Research Libraries, Washington, D.C. Office of Management Studies.
REPORT NO ISBN-0-918006-52-X
PUB DATE Sep 86
NOTE 157p.; Document contains small print. For the 1985 inventory, see ED 261 676.
AVAILABLE FROM Office of Management Studies, Association of Research Libraries, 1527 New Hampshire Avenue, N.W., Washington, D.C. 20036 (\$40.00, prepayment required).
PUB TYPE Statistical Data (110) -- Reports - Research/Technical (143) -- Tests/Evaluation Instruments (160)
EDRS PRICE MF01 Plus Postage. PC Not Available from EDRS.
DESCRIPTORS *Academic Libraries; Databases; Higher Education; Information Systems; *Library Automation; *Library Planning; Library Research; Library Statistics; Library Surveys; *Library Technical Processes; Matrices; Online Searching; Online Systems; Online Vendors; *Research Libraries
IDENTIFIERS Association of Research Libraries

ABSTRACT

Based on information and data from 113 Association of Research Libraries (ARL) members that were gathered and updated between March and August 1986, this publication was generated from a database developed by ARL to provide timely, comparable information about the extent and nature of automation within the ARL community. Trends in automation are traced in the areas of operating status, locally developed and amended vendor systems, system extent beyond the library, ownership status, public access, and amount of integration; and comparative responses from 1985 and 1986 are presented for the number and percentage of libraries reporting automation status and integrated status. In addition, this document includes: an introduction summarizing trends in automation and changes from the 1985 inventory; the survey letter, instruction and code sheet, and automated in-house systems listing; a listing of libraries and contact persons; listings sorted by function; complete listings of all functions in alphabetical order by library; and comments. (KM)

PREFACE

This second annual compilation of information and data regarding the use of automation by members of the Association of Research Libraries (ARL) comes from a database developed and maintained by the Office of Management Studies, ARL. Several improvements are evident: A new section for library comments, a more readable presentation of vendors, and additional counts and sorted listings of activities and status.

The database and this publication reflect the state of automation for 19 different functions in 113 ARL members as of early summer 1986. Recognizing that library technology is ever-changing, ARL members are encouraged to report changes in the status of their automation, by calling or writing the Office. The updated database will remain available for targeted searches for specific information.

As was last year's Automation Inventory, this year's publication is designed to be helpful to a diverse readership: Administrators wishing an overview of automation trends, systems librarians searching for specific examples of automation applications, and committees involved in planning and modification of automation.

We continue to be indebted to the ARL Committee on Statistics and the ARL Committee on the Management of Research Library Resources for their interest and support. And we offer special thanks to the Automation Contacts who have contributed to and used the database over the past two years and offered suggestions for its improvement.

— Duane E. Webster
Director/Office of Management Studies

SELECTED SPEC RESOURCES ON AUTOMATION

SPEC (SYSTEMS AND PROCEDURES EXCHANGE CENTER) KITS:

#126	July-August	1986	Automated Library Systems
#125	June	1986	Technical Services Cost Studies
#124	May	1986	Barcoding of Collections
#123	April	1986	Microcomputer Software Policies
#122	March	1986	End User Searching Services
#121	February	1986	Bibliographic Instruction
#112	March	1985	Automation and Reorganization of Technical and Public Services
#109	Nov.-Dec.	1984	Staff Training for Automation
#106	July-August	1984	Electronic Mail
#105	June	1984	Nonbibliographic Machine-Readable Databases

SPEC Kits are available mainly by subscription. Individual issues cost \$20 (\$10 to ARL library members only), with prepayment required. They may be ordered by Title and Number from: SPEC/Office of Management Studies, Association of Research Libraries, 1527 New Hampshire Ave., N.W., Washington, D.C. 20036. Outside the U.S. and Canada, add \$5.00 per order.

1985 AUTOMATION INVENTORY: A limited number of copies of The Automation Inventory of Research Libraries-1985 remain available for \$40.00. Ordering instructions are as above. Order by title and Publication Number: PB07.

SEARCHES:

Information in the Automation Inventory database is constantly being updated and refined. The database is being maintained inhouse using dBase II on a Kaypro 10 microcomputer. Floppy disks formatted for either CP/M or MS/DOS environment are available, for \$25. Assistance in using the database within a library is available for an hourly consulting fee. Searches of the database conducted by OMS personnel are available at the following fee schedule:

	<u>ARL LIBRARIES</u>	<u>NON-ARL LIBRARIES</u>
MINIMUM CHARGE	\$20	\$40
COMPLEX SEARCHES	\$25-\$100	\$50 - \$200

INTRODUCTION

This publication contains information and data from 113 members of the Association of Research Libraries, gathered and updated between March and August 1986. The database upon which this publication is based continues to be updated, and is available for targeted searches by contacting the SPEC Center at the OMS.

The Automation Inventory of Research Libraries was developed in 1984 to respond to the needs of ARL library directors requesting timely, comparable information about the extent and nature of automation within the research library community. Over the past two years, the Inventory has been used to help develop budget proposals, requests-for-proposals, and timetables for the integration of automation. At the request of ARL libraries, the Office has conducted searches of the database to discover sequences for the implementation of automation, how workstations are being assigned, and which libraries are using particular vendors.

The Inventory also can be useful in communicating with university administrators, scholars, and the commercial sector, to illustrate the diverse and extensive use of technology by research and academic libraries.

The number of libraries responding to this survey increased from 92 in 1985, to 113 in 1986. All libraries that took part in the survey in 1985 updated their information, with the exception of New York State and Yale University Libraries. However, their responses from 1985 have been included.

TRENDS IN AUTOMATION

A number of new tables are included in the 1986 version, to provide additional information on the extent and growth of automation among research libraries. Whereas last year's Inventory included tables that displayed the numbers of libraries according to operating status, amount of integration and patron access, this year's version includes tables covering six aspects of automation: operating status, locally-developed and amended-vendor systems, system extent beyond the library, ownership status, public access, and amount of integration.

Two tables that compare responses from 1985 and 1986 can be useful for identifying trends. For example, the percentage of responding libraries reporting operational local cataloging systems has increased 11 percent from last year to this year. The percentage of libraries reporting operational database conversion projects is up 9 percent. The percentages of libraries reporting operational online catalogs, serials check-in/claim, and circulation systems show the next largest increases -- 6-7 percent. Increases of 4-5 percent are found in the percentages of libraries reporting operational bibliographic instruction and collection development automation.

A 22 percent increase in the percentage of libraries reporting integrated online catalogs occurred between 1985 and 1986. The percentage of libraries reporting integrated local cataloging systems increased 19 percent, and the percentage reporting integrated acquisitions systems increased 18 percent. Increases of 15-16 percent were found in the percentages of libraries reporting integrated serials check-in/claim, circulation, and reserve room systems.

NEW FUNCTIONS

Two specific functions have been added in place of two undesignated "Other" categories: **Reference**, which includes ready-reference, local databases, and community services, and **Materials Booking**, which includes support of AV and other materials. These two were selected based on the interest of users of the database over the past year. In future versions, other functions may be substituted for these two. It is expected that the 17 basic functions will stay constant. The following pages describe the functions in more detail.

NEW LIBRARY COMMENTS

For the first time, libraries were provided an opportunity to comment as extensively as they wished. These comments are available in a separate section of the publication. The comments also can be searched online for specific information requests.

Libraries were asked to provide comments that they believed would be useful for other academic and research libraries using the database. The Comments section provides information on additional automated functions such as local area networks or archives processing, and describes exceptions to or explanations of libraries' responses to the inventory itself.

NEW DEFINITIONS/DESCRIPTIONS

Source of System is new this year. Libraries here designate whether the system comes from a utility or vendor, whether it has been locally developed, or whether a vendor-supplied system has been amended by the library.

Vendor is new this year. Libraries here list the vendor or utility name. The format enables quick online searches for these names.

For other definitions, which remain the same or nearly the same as 1985, see the pages which follow.

TO: Automation Inventory Contact Person March 20, 1986
FROM: Office of Management Studies
RE: Update of Library Responses to Automation Inventory
for 1986-87

Over the past year, much has occurred to change the status of automation in ARL member libraries. At the same time, librarians using the Automation Inventory have provided several helpful suggestions for improving and clarifying the Inventory. To reflect these changes, we are asking your assistance, as the Automation Inventory contact at your institution, in updating your library's responses for 1986-87.

All information you provide will be available for searching by ARL members. We also expect to produce an updated publication later this year, which we will send to ARL libraries. We will enter your changes as soon as we receive responses, and we expect to conclude this updating by May 30, 1986.

In addition to requesting changes in the status of automation at your library, we also are taking this opportunity to clarify definitions and revise some parts of the Inventory itself. The revisions have come about through the assistance of many Inventory users, and they are based on your information needs. As a general comment, we are asking for details about automation activities that are specifically an administrative responsibility of the library, or that are included in the library's budget.

Please review the revisions noted on the attached Instruction and Code Sheet before you proceed with updating your library's responses. You also can find a complete explanation of your library's 1985 responses in the ARL/OMS publication Automation Inventory of ARL Libraries, which was sent to your director's office in Fall 1985. However, if you cannot locate a copy and feel one would be helpful, please call to request an additional copy. This survey has been pilot-tested. However, because of the varied nature of automation activities, we expect that some of you will have questions. We will be pleased to speak with you about your automation status, and to assist in your updating: call Maxine Sitts at (202) 232-8656. You also can contact us through ALANET, ID ALA0913.

INSTRUCTION AND CODE SHEET FOR UPDATING AUTOMATION INVENTORY

A print-out of your library's 1985 responses to the ARL Automation Inventory is enclosed with these instructions. (A complete explanation of these responses can be found in the ARL/OMS publication Automation Inventory of ARL Libraries.)

Provide updated information on the enclosed print-out, using a contrasting-color ink, such as red or blue. Since we have clarified some definitions and also changed some choices, please refer to this Instruction Sheet column-by-column as you update your information.

FUNCTIONS (FAR LEFT COLUMN)

For all functions, we are interested in automation that is an administrative responsibility of the library or that is included in the library's budget.

Definitions of functions remain the same, except:

Database Searching

There is no need to list all databases accessed for Database Searching. You might want to note total number of databases and/or end-user activities under "Comments" column (#10, bottom of form).

Reference/local db ready-ref

A new function, previously an "Other" category. This includes support of such reference functions as ready reference files and community services.

Materials Booking

A new function, previously an "Other" category. This includes support of AV or other materials.

Other

There is no longer an "Other" category. If you have other categories of automation, note them under "Comments" (#10, bottom of form).

COLUMNS ACROSS THE TOP

1. STATUS (If the library has an operational system and is also modifying or upgrading the system, answers should refer to the system to be used in 1986-87.)

N NONE
P BEING PLANNED, PURCHASED, TESTED
O OPERATIONAL
M BEING MODIFIED, UPGRADED

2. SOURCE (The codes and definitions for this column are completely new.)

U UTILITY OR NETWORK
V VENDOR-SUPPLIED SYSTEM (commercial or library vendor)
W LOCALLY DEVELOPED SYSTEM
X VENDOR-SUPPLIED SYSTEM AMENDED BY LIBRARY

(CONTINUED ON NEXT PAGE)

SURVEY

3. LOCAL EXTENT
 - L LIBRARY in main library only
 - B LIBRARY AND BRANCHES
 - P CAMPUS-WIDE
 - M MULTI-INSTITUTIONAL
4. OWNERSHIP/LEASING STATUS OF LOCAL HARDWARE/SYSTEM IN COLUMN #7 (The codes and definitions for this column are completely new.)
 - J LIBRARY OWNED/LEASED (Library budget item)
 - K NOT LIBRARY-OWNED/LEASED
5. PUBLIC ACCESS
 - O ON-SITE IN LIBRARIES ONLY (MAIN AND/OR BRANCHES)
 - D DIAL-UP ACCESS
 - A LOCAL AREA NETWORK ACCESS
6. DEGREE OF INTEGRATION AS USED BY/IN LIBRARY
 - G SINGLE FUNCTION
 - I INTEGRATED, MULTI-FUNCTION
7. LOCAL COMPUTER/EQUIPMENT DIRECTLY USED BY/IN LIBRARIES, WHICH IS RESPONSIBILITY OF LIBRARY (For example, indicate what the library uses to access a utility or network. Do not list utility or network's mainframe.)
 - F MAINFRAME
 - S SUPERMINI
 - M MINICOMPUTER
 - R MICROCOMPUTER
 - T TERMINALS ONLY (This is a new, additional choice.)
8. NUMBER OF WORKSTATIONS normally used for the function or otherwise supporting that function. (Although there are many multi-use workstations, try to indicate primary use of workstations. We will not be totalling this column.)
9. NAME OF VENDOR (or hardware/software if locally-developed system) or NAME OF NETWORK/UTILITY

This column definition is completely new. There is room on the printout for you to enter the acronym of the local vendor system (or hardware/software) or the network/utility for each function. Suggested acronyms can be found in the attached Automated Inhouse Systems Listing. Comments that now appear in this print-out will be removed for the next Inventory version. Updated freeform comments can be entered at the bottom of the matrix sheet (#10).
10. COMMENTS that you believe useful for other academic and research libraries using this database. This freeform comments section will be much larger in the 1986-87 inventory. This is where you can provide information on additional automated functions such as LAN or archives processing, or comments regarding exceptions to or explanations of your library's responses.

If you have questions, call Maxine Sitts at 202-232-8656.
Clearly mark changes and additions on your library's printout.
A contrasting ink color would be most appreciated.

Return the printout page within one month of receipt,
but no later than May 1, 1986, to:

AUTOMATED INHOUSE SYSTEMS LISTING A GUIDE FOR STANDARDIZED REFERENCES TO INHOUSE SYSTEMS

This listing is intended as a guide for standardized references to inhouse systems for completing Column #9. For utilities/networks, use the standard acronyms such as: OCLC, MLN, RLIN, UTLAS.

ARL members are using a number of systems within their libraries. As noted in Column #2, some libraries have decided to implement commercially available systems or software developed by vendors or libraries (V); some have developed their own systems locally (W); and others have obtained library automation software developed by others and amended it to meet their local needs (X).

Currently, there are more than 30 commercially-supported options for both multi-function integrated automated library systems and single-function systems. These options are available for a wide range of functions including the automation of circulation, acquisitions, serials control, and online public access catalogs. The following listing represents commercially-available systems likely to be implemented in ARL member libraries.

ACRONYM FOR COLUMN #9 ENTRY

ADLIB	Advanced Library Concepts
ALIS II	Data Phase
ALIS III	(Data Phase) Marketed by UTLAS
ATLAS	Data Research Associates
BACS	Bibliographic Access & Control Systems, Washington University
BLIS	Biblio-techniques Library and Information System
BOOKLINE	Blackwell automated acquisitions
CARL	Colorado Alliance of Research Libraries System
Checkmate	CLASS automated serials control system
CLSI	CL Systems Inc.
DOBIS	(IBM)
DYNIX	Dynix Integrated Library System
EBSCO	Serial Control System (for online serials check-in)
GEAC	GEAC Library Information System
ILS	Georgetown University Medical Center Library Information System
INNOVACQ	Innovative Interfaces
LIAS	Pennsylvania State System
LIBS 100	CL Systems Inc.
LINX	Faxon
LS/2000	OCLC local library automation
NOTIS	Northwestern Online Total Integrated System
OCLC	Serial Control subsystem
PALS	Automated Library System (Mankato State, also marketed by Sperry)
PERLINE	Blackwell automated serials control
PHILSON	Serials control
SAILS	Swets North America, Inc. multi-function system
SC-10	Faxon online serials check-in facility
STACS	Battelle's serials control systems, based on BASIS software
TOMUS	Carlyle Systems
ULISYS	Universal Library System
URICA	McDonnell Douglas
VTLS	Virginia Tech Library System
MLN	Washington/Western Library Network software for mounting inhouse, rather than its use as a bibliographic utility

TABLES OF COUNTS AND TOTALS

A simple spreadsheet program was used to create these tables. Rounding errors in some cases lead to totals of other than 100 percent. The counts include Operational and Planned systems, as well as systems Being Modified. Libraries not responding to particular functions, or responding with "N" (no automation), were not counted.

SORTED LISTINGS BY FUNCTION

In all cases, Number of Workstations indicates the approximate number normally used for the function or otherwise supporting that function. Although there are many multi-use workstations, libraries were asked to indicate the primary use of workstations in this column. The numbers should not be totalled.

System refers to the Name of Vendor, which in most cases was selected from a list provided to libraries (see introductory section).

Other codes found in some listings in this section are defined page-by-page.

TULANE UNIVERSITY						

LOCAL EXTENT

- L LIBRARY in main library only
- B LIBRARY AND BRANCHES
- P CAMPUS-WIDE
- M MULTI-INSTITUTIONAL

PUBLIC ACCESS

- O ON-SITE IN LIBRARIES ONLY (MAIN AND/OR BRANCHES)
- D DIAL-UP ACCESS
- A LOCAL AREA NETWORK ACCESS

DEGREE OF INTEGRATION AS USED BY/IN LIBRARY

- G SINGLE FUNCTION
- I INTEGRATED, MULTI-FUNCTION

LOCAL COMPUTER/EQUIPMENT DIRECTLY USED BY/IN LIBRARIES, WHICH IS RESPONSIBILITY OF LIBRARY (For example, libraries were asked to indicate what the library uses to access a utility or network, rather than a utility's or network's mainframe.)

- F MAINFRAME
- S SUPERMINI
- M MINICOMPUTER
- R MICROCOMPUTER
- T TERMINALS ONLY

COMPLETE LISTING OF ALL FUNCTIONS BY LIBRARY
ALPHABETICAL ORDER

The entries in this section reflect individual libraries' descriptions of their automated systems as of a certain point in time. Updated information continues to be provided to OMS. In some cases, the Comments section will provide clarification of responses.

COMMENTS

For the most part, comments are direct quotes from Automation Inventory contact persons listed in the introductory section. Comments reflect information that respondents believe useful for other academic and research libraries. They contain information on additional automated functions (such as local area networks or archives processing) and on exceptions to or explanations of library responses.

COMMENTS

Provided by Libraries

079 ALABAMA, UNIVERSITY OF. Cataloging Utility and ILL use SOLINET. Workstations - 64 total expanding to 72 in August 1986. Database Conversion Workstations are multi-functional. Some Circulation Workstations are multi-functional.

074 ARIZONA, UNIVERSITY OF. Administrative uses IBM system 36. Database Conversion uses OCLC MICROCON.

085 BRIGHAM YOUNG UNIVERSITY. Serials Union List uses Utah Union List of Serials.

001 BRITISH COLUMBIA, UNIVERSITY OF. Acquisitions has new software. Cataloging Local has new local 4381, which replaced UTLAS. Circulation and Reserve Room use custom software. COM Catalog system was produced with local software and hardware. Bibliographic Instruction has been developing use of CAI staff training. Public Access terminals are in a local area network. Non-library terminals are not permitted access at this time.

057 BROWN UNIVERSITY. Acquisitions system will be replaced with BLIS. Serials Union List - part of acquisition system to be replaced. Circulation and Reserve Room systems to be replaced by BLIS. For Administrative, the library uses 2 LISA 12 MACINTOSH, 1 IBM PC. Database Conversion vendor not yet determined. Workstations -- given number reflects the number of terminals the system can support simultaneously.

097 CALIF., BERKELEY. Administrative system is PERTEC based. Serials Check-in Claim, Acquisitions, and Serials Union List systems are all microfiche based. Serials Union List and Online Catalog use GLADIS and MELVYL. Interlibrary Loan uses GLADIS. Database Conversion uses OCLC and RLIN. COM Production -- Microcomputer and supermini computer provide input tapes for processing on mainframe. GLADIS is the Berkeley campus system, and MELVYL is the UC systemwide catalog.

023 CALIF., DAVIS. The Library is currently involved in an overall automation planning effort which will result in acquisition, upgrade, and or modification of basic functions (i.e. patron catalog, acquisitions, serials control and information access, circulation, ILL, cataloging interface) in a phased approach in 1987-1990. The number of Workstations and public terminal ports for the total library system may be upwards of 250. Serials Union List -- the current system will be replaced by the new implementations. Answers here relate to current system, which provides data entry on an in-house LSI 11/73 for batch update and list processing on the CAMPUS BURROUGHS 7800. Public Access is online through the California Academic Libraries List of Serials available via UC Melvyl Catalog. Hardcopy and microform lists are available. Circulation's current CLSI system will be replaced and integrated into the new implementations. Answers here relate to the current system. Reserve Room CLSI software is not implemented for Reserve Book functions except to indicate that an item is currently located in reserves. Plans are for a new or upgraded Circulation system to provide this function as indicated. Online Cataloging

has a local PAC in planning; answers here reflect the current OPAC system. The system was developed, housed, and supported by UC systemwide, not campus. An increasing portion of Database Searching will be done by end users in the near future, i.e., BRS after Dark, Knowledge Index, CAS, etc. Likewise, access methods will change with the advancing communications technology. Bibliographic Instruction includes online catalog (MELVYL) search as well as INFOTRACK. End user training is included in instructions for graduate students. ILL transmission is computer assisted via MELVYL OPAC, CLSI, RLIN, OCLC, and ONTYME.

090 CALIF., IRVINE. Serials Union List and Online Catalog use UC Union Online Catalog. Serials Check-in Claim uses the serials component of the ORION System developed by the UCLA Library. Serials Union List and Online Catalog use the MELVYL Catalog developed by the University of California, Division of Library Automation. Online Catalog has 52 ports with 36 for hard-wired terminals and 16 for dial-up access. Serials Union List is a file of the MELVYL Catalog.

082 CALIF., LOS ANGELES. ORION, the UCLA library's locally developed online information system, runs on the Office of Academic Computing IBM 3090 under MVS-XA and TSO. ORION currently includes Acquisitions, fund accounting, serials processing, bindery, catalog maintenance and linked authority control modules in an integrated system with public access. Although ORION is mainframe-based, PC applications are being developed to capture and transfer data from external sources without staff rekeying. In May 1986 the database included 1.4 million bibliographic and 1.9 million authority records. Planning is in progress for a circulation/inventory control module to be fully integrated with other ORION modules and tested in 1986/87. (CLSI is currently used for circulation in the University Research and Biomedical Libraries.) In addition to 27 ORION public access terminals, 28 terminals provide access to the MELVYL database, the University of California's online union catalog. Cataloging is done via OCLC with archive tapes loaded weekly into ORION. Catalog editing and maintenance is done on ORION which includes a linked authority control system. ORION is used in all ULCA campus libraries. Local Extent is for Library and branches. Local off-campus institutions such as the University of California, Irvine Library and the Getty Center Library have established ORION private databases that operate on the UCLA mainframe. In addition many institutions within the Los Angeles area have established search-only dial-access accounts. The 68 Administrative Workstations include 23 dedicated to systems development work (ORION and administrative applications) and 39 PCs located in all campus libraries

046 CALIF., RIVERSIDE. Public Computer Workstations -- patrons access campus computers.

053 CALIF., SAN DIEGO. Serials system will be moved from campus B7800 to vendor-supplied system. MELVYL Online Catalog is universitywide system; campus can also access by LAN and dial-up. Several Workstations indicated as terminals are actually microcomputers (e.g., M300s).

081 CALIF., SANTA BARBARA. The locally produced Serials List is used to produce a UC-wide Union list, available through MELVYL. The Online Catalog is a 9-campus effort, MELVYL. It is not a local online catalog.

024 CASE WESTERN RESERVE UNIVERSITY. Computer Workstations (IBM PCs) are only in Law Library. Database Conversion is OCLC to GEAC, loading archive tapes on ongoing basis.

112 CENTER FOR RESEARCH LIBRARIES. Acquisitions uses DATA GENERAL and IBM. Cataloging Utility uses ILLINET. Administrative uses TANDY, IBM and DATA GENERAL.

093 CHICAGO, UNIVERSITY OF. Cataloging Local uses LC MARC. Collection Development uses LC MARC. Public Computer Workstations are located at the U of C Computation Center. Database Conversion has LC Connection. The University of Chicago Library Data Management System (LDMS) Software is owned and maintained by the Library. LDMS runs on a remote, shared AMDAHL 5860 computer not under Library administrative control. Computing charges at established rates are paid from the library budget. The library owns or leases all terminal, microcomputer, and communications equipment within the library, except for Public Computer Workstations.

039 CINCINNATI, UNIVERSITY OF. Acquisitions, Serials Check-in Claim, Serials Union List and ILL have undecided Access and Workstations. Bibliographic Instruction undecided as to computer. Database Conversion performed inhouse.

086 COLORADO, UNIVERSITY OF. Acquisitions is linked to university IBMs, fund account only. Administrative system is supplied by Academic Computer Center.

058 COLUMBIA UNIVERSITY. Circulation is moving to BLIS. ILL uses NYSILL. Serials Check-in Claims uses LINX. Serials Check-in Claim, and Bibliographic Instruction automated only in the Health Sciences Library. Serials Union List is local. Database Searching uses BRS, SDC, NEXIS, WILSON, NTIS. Administrative and Reference use various vendors. Some of the functional distinctions are becoming blurred, e.g., equipment in public service areas is being used for RLIN pre-order searching and other "technical services" searching as well as patron reference searching and D.B. Ready Reference. Nothing is listed under Collection Development although bibliographers do access RLIN and other data bases routinely, but there is no specific collection development "system" unless online Conspectus at RLIN qualifies, as well as microform master negative records in RLIN. Libraries and the Columbia University Center for Computing Activities (CUCCA) merged January 1, 1986, except Administrative User Services now report to the Vice President and University Librarian. The 163 Workstations for the function "Public Computer Workstations" includes terminals and micros in library as well as non-library locations.

005 CONNECTICUT, UNIVERSITY OF. Serials/Union List uses online catalog database. Circulation Workstations at main circulation desk. Online Catalog has 20 workstations with main catalog, 15 decentralized. Public Computer Workstations are coin-operated micros and micro lab. Administrative uses IBM PCs. Database Conversion uses OCLC for main collection.

089 CORNELL. Cornell planning to use NOTIS for integrated system. Public computer workstations are IBM PCs.

050 DARTMOUTH COLLEGE. Catalog Workstations are accessible by Circulation, Acquisitions, students, and offices.

- 106 DELAWARE, UNIVERSITY OF. Database Searching uses DIALOG, BRS, CAS ONLINE, INFOTRAT, and MEAD DATA. Public Computer Workstations are IBM PCs and APPLE. Administrative uses IBM PCs.
- 035 DUKE UNIVERSITY. By "Administrative" assume office automation by means of personal computers. By "Cataloging Local" assume maintenance of the online catalog.
- 088 EMORY UNIVERSITY. The Emory libraries and IBM are engaged in a joint study project to implement the DOBIS LIBIS system. All functions except Serials Check-in Claims are scheduled to be operational in one or more of the Emory Libraries during 1986-87.
- 066 FLORIDA STATE UNIVERSITY. Catalog is through Florida Center Library Automation. Library expects to have Telefacsimile later in 1986. Eight Public Computer Workstations are PLATO terminals.
- 042 FLORIDA, UNIVERSITY OF. Bibliographic Instruction uses IBM PCs for CAI. Telefacsimile uses IBM Scan Master tied to state network. Administrative uses University network. The Library also maintains and provides access to a large collection of machine-readable data files, which currently includes over 8,000 datasets containing demographic, economic, scientific, and other types of data.
- 060 GEORGETOWN UNIVERSITY. Acquisitions uses OCLC for searching only, GEAC is inhouse. OCLC is used to build the Serials Union List. Some Database Conversion is done inhouse. Online Cataloging: staff-only use at present.
- 018 GEORGIA INSTITUTE OF TECHNOLOGY. Acquisitions will be part of integrated system. Serials/Union List part of SE/ARL through SOLINET. Public Computer Workstations for Online Catalog. Database Conversion is completed.
- 056 GEORGIA, UNIVERSITY OF. Database Searching has a total of 2,501 databases, 1,359 end-user activities. Mainframe computer is IBM 3081 and IBM Series 1 for Circulation. Inhouse integrated system - MARVEL (Management of Resources for University Libraries).
- 045 GUELPH, UNIVERSITY OF. Reserve Room is included in Circulation module. Bibliographic Instruction uses VIDEOTEX TOAD (Teaching On A Disk), CAI. Interlibrary Loan uses COSY, IMMEDIA TELEX. Administrative uses Computer Conferencing.
- 011 HARVARD UNIVERSITY. Database Conversion also uses a vendor supplied system amended by the Library.
- 063 HAWAII, UNIVERSITY OF. Cataloging Utility uses ADLIB for local cataloging. Database Conversion uses DIS-CON. ILL plans to change to ADLIB.
- 077 HOUSTON, UNIVERSITY OF. Plans to use a local network for Public Computer Workstations. Telefacsimile uses a public switching network.
- 110 HOWARD UNIVERSITY LIBRARIES. Online Catalog uses MIN MARC catalog instruction with circulation only.

109 ILLINOIS, UNIVERSITY OF. LCS is Library Computer System.

015 IOWA STATE UNIVERSITY. Reference uses IBM XT NAS 9160 (COMP.CTR.)

091 KANSAS, UNIVERSITY OF. Serials Check-in Claim is new local. Cataloging local has local-full authority control, IBM. Circulation is a local system, IBM. Reserve Room uses Circulation System. COM Catalog has temporary access pending online catalog. Online Catalog is planned for fall, 1987.

070 KENT STATE UNIVERSITY. The library has purchased and installed the NOTIS software and anticipates implementing an online catalog in later 1986 and online circulation in early 1987. Responses reflect this expected implementation of NOTIS at Kent State during 1986-87. Ownership Leasing and Local Computer Equipment: NOTIS is being installed on the University Computer Center's IBM 3081-D and will be operated by the Computer Center for the Library in a shared environment. Consequently, the only hardware item in the library's budget is for terminals. The Library is responsible for the annual software maintenance fee charged by NOTIS. The Library leases OCLC M-300 Workstations for its OCLC functions. Workstations - Library anticipates being off the OCLC Serials Subsystem for check-in by the end of 1986-87.

014 KENTUCKY, UNIVERSITY OF. Database Conversion uses INFOTRAC.

095 LAVAL UNIVERSITY. ILL uses ENVOY and UTLAS. Laval maintains online with UTLAS a List of Subject headings in French with English equivalences, a source file called Repertoire de vedettes-matieres. Also, they are in the final process of selecting a commercial integrated online system to replace and upgrade the actual online separate modules. The new system will take advantage of the recent capus-wide LAN inaugurated in 1985, called LOCALNET 20 from SYTEK.

051 LINDA HALL LIBRARY. Library has a total of 6 Terminals, and 5 printers. Four of the terminals are M105, one is a TI-787, two are M300 with 20 Mb fixed disks. The library uses OCLC ILL MICROENHANCER; KNOWLEDGEMAN (DBMS), PC TALK III (telecom.), LOTUS 1-2-3 (spreadsheet), and WORD PERFECT (wordprocessor) software. They have four DATA SOUTH DS-180s, one Data South DS-220, and one EPSON LQ-1000 printer.

108 LOUISIANA STATE UNIVERSITY. Present Serials Union List is local, in library and branches, access on-site in libraries only, with integrated functions. Present Circulation system is similar to Serials Union, only it is a single function system. Cataloging Utility at present is a Utility Source extending only to the main library. It is owned by the Library, with onsite access in libraries only. It is a single function system, using only terminals. Collection Development presently uses a utility extending to the library and branches. Onsite access is in the libraries only. It is a single function system, using a minicomputer. New System will use OCLC and RLIN.

094 MARYLAND, UNIVERSITY OF. Figures are for College Park Campus only. GEAC terminals serve multiple functions. System currently supports 260 terminals. Approximate use levels are: public access - 86, Circulation -

79, Technical Services - 95.

048 MASSACHUSETTS INSTITUTE OF TECHNOLOGY. Serials Commitment List on Campus mainframe - IBM 3033, MULTICS

075 MASSACHUSETTS, UNIVERSITY OF. Circulation expects to be operational on the LS 2000 for the Science Library by fall of 1986. The library continues to load data, bar code books, perform retro conversion, link records. Bibliographic Instruction is testing the Delaware package.

092 MCGILL UNIVERSITY. Database Searching also uses approximately 25 commercial databases.

061 MCMASTER UNIVERSITY. Serials Union List, Circulation, and Reserve Room use IBM4381 & 8130, PGMS in COBOL.

069 MIAMI, UNIVERSITY OF. Cataloging Utility uses SOLINET. Serials Union List uses ASERL coop proj. SOLINET database. Online Cataloging is testing TOMUS. Public Computer Workstations are owned by the Art Science Library. Database Conversion uses SOLINET.

003 MICHIGAN STATE. Plan to implement a total integrated system in 1987-89. Present CLSI Circulation Catalog Access system available as public Workstation on campus LAN. INFOTRAC in main library for end user searching. Star System (CUAPRA) for support of special databases. Administrative microcomputer applications include record keeping, data analysis, statement and or report production for database searching (VERSAFORM and 1-2-3), Student payroll (1-2-3) and Interlibrary Loan (RBASE 500) and also remote Bulletin Board System to receive some types of user requests.

084 MICHIGAN, UNIVERSITY OF. Circulation system is operational in 9 libraries with 1.4 million short bib. records. Planned = NOTIS. Will convert data over. Have ca. 800,000 full bib. records. Implementation date -- 12-87. Plans on 60-65 terminals. (all libraries will use -- 9 of 20 now use it.) Some of these terminals will be multifunctional (e.g., Circulation and Public Computer Workstations). Will use NOTIS as part of a local area network for campus document delivery. No plans to direct interface NOTIS and RLIN -- will continue to use RLIN. Acquisitions has one dialin port for public services. Plan to use NOTIS, but not until summer of 1988. Plan on 6 terminals in department, with data entry (but not actual order placement) distributed to other units (e.g., branch libraries or units of the main library). Serials Union List uses a homegrown batch union list. RLIN for cataloging. No automated checkin. INNOVACQ for Acquisitions. Planned = NOTIS, summer 1988. Acquisitions is area that is least planned. Will have at least 6 NOTIS terminals for this centrally, plus some in each branch. Public Computer Workstations - now = GEAC circulation file available on campus (a-t-call number only). Planned = NOTIS, with 90-100 terminals, with 200 ports available through campus network. Bibliographic Instruction now uses RLIN, with no local system. Twenty RLIN terminals for all cataloging terminals. Planned = NOTIS, and lower number of RLIN terminals to 6. Total number of terminals to 6. Total number of terminals will remain the same. Total NOTIS ports will equal 400, 200 inhouse. Database Searching distributed to each library, mostly with Zenith micros, with a few other TIs left over. Planned = partial purchase of BRS files that would then be loaded onto NOTIS computer and available through that system. Would log

into this as a separate system. No target date (maybe 88-89), NOTIS CPU - 4381, group 12. Other - now 85 micros used for various list creation (new books, etc.)

087 MINNESOTA, UNIVERSITY OF. Database Conversion also uses MARCIVE.

008 MISSOURI, UNIVERSITY OF. Cataloging Local and Online Catalog have local enhanced software. Collection Development uses WORDSTAR, MULTIPLAN. etc. Database conversion is inhouse and external commercial. Database Conversion and Reference both have vendor supplied systems.

036 NATIONAL AGRICULTURAL LIBRARY. Database Searching uses MEAD DATA, WILSONLINE. Administrative uses IBM PC and LANIER. NAL is issuing an RFP for an integrated library system in mid-1986. The above answers reflect an estimation of the system to be acquired.

019 NATIONAL LIBRARY OF CANADA. Acquisitions now covers purchasing and book fund accounting. Will cover Legal Deposit operations by early 1987. DOBIS system used by NLC is Canadian Federal Government version, not IBM's. Cataloging Utility includes: a - use of NLC DOBIS by other libraries (170 remote dedicated Workstations) b - use by NLC of other utilities (UTLAS, OCLC, RLIN, etc., with three dedicated Workstations, numerous undedicated). Cataloging Local includes use of DOBIS by NLC for cataloging and pre-order searching. COM Catalog is only a backup to online catalog access via DOBIS. Online Catalog function is available from any DOBIS terminal. Workstation count here covers only terminals in public service areas. Database Searching facilitates access to 26 systems and some 400 data bases. Interlibrary Loan is expected to be in operation in early 1987. Administrative includes electronic mail, word processing, financial and personnel systems. Reference Local DB Ready Reference uses IBM PC with Lotus 1-2-3 and INMAGIC. Other Union Catalogs include NLC's Union Catalog of Books and Union Catalog of materials for the Handicapped. Collection Development covers system now being developed at NLC for Canadian Conspectus. Expected to be in at least partial operation in 1986.

068 NATIONAL LIBRARY OF MEDICINE. The number of workstations reflects only those within the library. Many different types of computer terminals can search databases. Several hundred are in library and several thousand outside library. Collection Development has special databases developed to do collection analysis in specific subject areas.

044 NEBRASKA UNIVERSITY OF. Serials Check-in/Claim EBSCONET for claiming EBSCO titles only - not a check-in system. Cataloging/Utility 7 terminals used for cataloging activities. Cataloging Local uses terminals for cataloging and database maintenance. ALIS II capable of doing cataloging - rarely use for Cataloging/Local. Circulation uses a Data General S230. Reserve Room uses a Data General S230. Interlibrary Loan uses OCLC, OCTANET, Nebraska Library Communications System. Telefacsimile tried, expensive. Administrative uses Compucorp 785, IBM. Database Conversion, formal retrocon project for serials only, mono. titles converted when adding copies and volumes and problem-solving.

073 NEW MEXICO, UNIVERSITY OF. Serials Check-in uses LINX for ordering only. Reserve Room reserves are integrated in Circulation system. Local Extent was re-interpreted so that "B" (not "L") was used for centralized

activities, e.g., an acquisitions system that the main library uses to order materials for itself and its branches. Public Access includes the serials holding list (the primary output of that system) via COM fiche, but not to the system that produces the product.

071 NEW YORK PUBLIC LIBRARY. Public Computer Workstations use ADMINS.

083 NEW YORK UNIVERSITY. Database Conversion also uses REMARC. Database Searching - between 55 and 65 different databases searched, though 8-10 are used the most. 100-150 searches per month, both quick "Ready-Reference", and longer searches. Local Area Network installed in main library - baseband, Ethernet, links all GEAC equipment throughout 14 floor building to GEAC CPUs.

096 NEWBERRY LIBRARY. Database Conversion uses HEWLETT PACKARD hardware, FINANCIAL Software, DEVELOPMENT STRATEGIES, Inc. Software.

101 NORTH CAROLINA STATE UNIVERSITY. TRLN is Triangle Universities Library Network.

002 NORTH CAROLINA, UNIVERSITY OF. Serials Union List uses IBM 3083.

027 NORTHWESTERN UNIVERSITY. In addition to primary reliance on NOTIS, Library utilizes a mainframe-based word processing system for a number of administrative and public service functions, and is increasingly using microcomputers (IBM PCs) for a variety of tasks. The word processing system, called Online E.T.C., from Applied Data Research, Inc., enables the Reference Department to supply customized pathfinder-type bibliographies to students, provides a number of information retrieval facilities, and has over 100 users within the main library. The system resides on the same mainframe as NOTIS and is available from every staff-use NOTIS terminal.

078 NOTRE DAME UNIVERSITY. Acquisitions uses IBM. Database Conversion uses BRS-DIALOG. Database Conversion uses OCLC. Currently completing central negotiations with NOTIS. Database load expected Fall 1986. (OPAC-Spring '86, CIRCARES-Fall '87, Acquisitions - Summer '88) Telefacsimile is in early planning stages.

113 OHIO STATE UNIVERSITY. Acquisitions and Serials Check-in Claim both interface INNOVACQ with LCS. Circulation and Online Catalog both use a shared AMDAHL V8. Database Searching uses BRS, DIALOG, SDC, and others. Acquisitions system in Main Library and Health Science Library only. Online Catalog terminal count includes those in staff areas which access online catalog. Telefacsimile is in the Health Science Library Only.

065 OREGON, UNIVERSITY OF. Com Catalog transfers OCLC tapes to BNA.

049 PENNSYLVANIA, UNIVERSITY OF. Cataloging Utility uses OCLC. Circulation uses LIBS100, they will also phase in NOTIS and phase out CLSI during 1987-88.

059 PITTSBURGH, UNIVERSITY OF. End-user lab with 10 IBM PCs. All NOTIS terminals attached to university-wide AT&T ISN fiber optic network.

017 PRINCETON UNIVERSITY. Database Searching - We have access to 300

different databases through 8 vendors.

013 PURDUE UNIVERSITY. COM Catalog uses AUTOGRAPHICS Materials booking uses 1 ZENITH terminal. Local integrated online catalog development continues on VAX hardware, but change to other hardware is planned.

111 QUEEN'S UNIVERSITY. Serials Check-in Claim system is planned for late 1986. Serials Union List uses local software with GEAC Database. Cataloging Utility purchases machine records from National Library of Canada. COM Catalog uses local software and microfiche vendor with GEAC Database. Online Catalog has over 1000 terminals campus-wide which can access through local network. Database Searching uses various database vendors. Collection development operates partially through bibliographic searches on GEAC. Interlibrary Loan uses NANO TECH Microcomputer System with ENVOY 100. Administrative system is local IBM using "PROF" system with electronic mail, etc. Database Conversion is complete except for Law Library, which is in process.

010 RICE UNIVERSITY. End user searching: BRS Afterdark Knowledge Index, CAS Online.

025 ROCHESTER, UNIVERSITY OF. Use micro for access state ILL. Developing a jointly operated microcomputer facility in the library with 70 Workstations, printers, circulation area, reference consulting areas for both students and faculty, classroom, and offices. This area will also explore library's role with CD ROM applications and collecting datasets.

037 SASKATCHEWAN, UNIVERSITY OF. Database conversion and bar-code labeling complete.

072 SMITHSONIAN INSTITUTION. Administrative uses WANG.

047 SOUTHERN ILLINOIS UNIVERSITY. Administrative uses IBM PC, and TANDY. Materials Booking uses Research Technology, INC. Although LCS is primarily a circulation system, it does give us an online, abbreviated version of the author-title catalog and it is increasingly used for this purpose by patrons and staff. There is not yet a full bibliographic record available, nor subject searching, but this is likely to come. In addition, being an online state-wide system, LCS allows us to search the A-T databases of some 27 other academic libraries in the state.

062 STANFORD UNIVERSITY. This report summarizes the status of automation among six independently administered libraries at Stanford University. The status of any single function states the existence of automation for that function campus-wide. The status from library to library will vary. Reserve Room - Meyer Memorial Undergraduate Library only. Database Searching - approximately 25 databases. Telefacsimile - operational in Lane Medical Library. Public Computer Workstations - campus-wide.

055 SUNY, ALBANY. Interlibrary Loan uses NYSL, TWX, GEAC, and TELECOM Cataloging Local uses SPERRY for catalog maintenance. Reserve Room will automate checkout in September of 1986. Online Catalog has 7 public terminals, and 8 dialup. Database Conversion uses MICROCON We also produce an index to the Albany, N.Y. Times Union on a KAYPRO PC using WORDSTAR DATASTAR and INFOSTAR.

107 SUNY, STONY BROOK. Bibliographic Instruction is Stony Brook Instructional Network Computing. Database Conversion is MICROCON (M300).

067 SYRACUSE UNIVERSITY. Database Searching uses BRS DIALOG, SDC, WILSONLINE, RLIN. Collection Development uses IBM PC. Public Computer Workstations use local computer. Administrative uses IBM PC. SULIS is Syracuse University Library Information System. SULIRS is Syracuse University Library Information Retrieval System.

099 TEMPLE UNIVERSITY. Database Searching is capable of searching 30 databases. Circulation has an additional 5 terminals for data entry. There will be a total of 100 GEAC terminals in the system by the end of 86-87.

064 TENNESSEE, UNIVERSITY OF. Administrative has Campus IBM system, accounting, PCMIAS. Database Conversion uses M300, REMARC, and a locally developed system.

026 TEXAS A&M UNIVERSITY. Cataloging Utility uses 2M300s and DATAPHASE. Circulation and Reserve Room have faculty dialup. Database Searching uses 11 vendors, and a variety of equipment.

028 TORONTO, UNIVERSITY OF. Cataloging Utility uses 3 IBM PCs, 16 dumb CRTs. Administrative has 1 IBM PC.

032 TULANE UNIVERSITY. Binding System is Operational. It is vendor supplied, located in the Main Library, not owned by the library, single function microcomputer. It has one Hertzberg Connection terminal. Accounting system is operational. It is a locally developed system located in the main library, but not owned by the library. It is a single function microcomputer.

054 UTAH, UNIVERSITY OF. Acquisitions Serials Union List, Administrative, and Reference use a WANG VS 100. Database Searching is done through TELENET. Telefacsimile uses NEC. Public Computer Workstations are APPLE and IBM.

102 VIRGINIA POLYTECHNIC INST. STATE UNIVERSITY. Cataloging Utility and Interlibrary Loan also use SOLINET. Administrative uses VTLS, Campus mainframe software, various PC software packages. Although VTLS, INC. was officially incorporated as a commercial enterprise in July 1985, design and development of the system began and was carried forward for about 10 years prior to that time as a local Virginia Tech University Libraries application. For this reason, W was selected as VTLS source code, rather than V or X. The super minicomputer referenced is a HEWLETT PACKARD 930, scheduled for installation between January and March 1987. VTLS software will be modified in advance by VTLS Inc. to run on the SPECTRUM-based HP930 and data migrated from the HP3000-68 presently in use. Microcomputers referenced are M300s, IBM PCs, IBM PC XTs, and IBM PC ATs. These models are currently in use, along with a variety of terminals. the majority of terminals are installed in public use areas; the majority of PCs in staff and administrative work areas. The number of such devices installed will significantly increase with system upgrade to the HP930. The numbers cited for Workstations are gross estimates of future Workstation numbers. Numerical validity is marginal, as current organizational and workflow

patterns are under review. In some cases, M was selected as local extent code because current staff and public access from remote sites via dial up and local area network will be significantly expanded by mid 1986-87, with installation of the HP930. Although database searching is currently available only via utility - and vendor - supplied systems, access to databases via CD ROM-video disk mounted locally is anticipated with installation of the HP390. Local extent would then appropriately be categorized as M. Most such searching now involves telecommunications; then, it should be possible to access not only VTLS proper but also a variety of databases on CD ROM-video disk from any terminal or PC with access to the HP630.

043 WASHINGTON STATE UNIVERSITY. Intend to Implement Serials Check-in Claim and Reserve Room systems.

100 WASHINGTON, UNIVERSITY OF. Serials Union List is a list of all the serials held by UW Libraries. Database Searching and Reference - over 200 databases. Interlibrary Loan - in addition, we may use the WLN system when it becomes available. Administrative - we do not have a "system" but rather a number of individual PCs. Database Conversion - in addition, some recon is being done by OCLC. Reserve Room - included in Circulation Workstations.

098 WASHINGTON UNIVERSITY, ST. LOUIS. Acquisitions and Circulation are old batch systems which will be added to NOTIS in the future.

012 WATERLOO, UNIVERSITY OF. Cataloging Utility uses NLC, UTLAS source data only.

104 WAYNE STATE UNIVERSITY LIBRARIES. Workstation numbers are for WSU only, not other institutions in the multi-institutional environment. Bibliographic Instruction is also accessible in off-library microcomputer labs. Acquisitions - we are using NONESUCH now, but will use NOTIS for acquisitions. Answers two through nine address the present operation of NONESUCH only, since we may not use NOTIS until 1988. We have 12 NONESUCH terminals in the system. There are 12 cataloging workstations in Central Technical Services, and three cataloging workstations in the Medical Library. Serials Union List - we now use an OCLC microfiche serial product union list for the State of Michigan, S.E. Michigan region, and for local listing only. Although we'll continue to use these products for state and regional union lists, we will use NOTIS to show Wayne State University's serial holdings. We also will continue to use OCLC terminals in all campus libraries to search serial holdings. This should be in progress by the end of 1987. Circulation - will be operational in September 1986. Bibliographic Instruction - we are testing a computer-assisted instruction (CAI) version of a library skill instruction course required of all entering freshmen. Collection Development - we use Blackwell approval plans. Public Computer Workstations - ten IBM PCs are in the library and owned by the library. Thirty Zeniths are owned by the Computing Services Center, housed in library space. Administration - the Library Business Office has access to the University's Financial Accounting System (FAS). In addition, all library units have PCs for wordprocessing, spreadsheets, etc.

040 WISCONSIN, UNIVERSITY OF. Circulation and Online Catalog use IBM - Network Library System. Database Searching uses IBM PC, IBM XT. NOTIS has been selected for acquisitions serials control. Implementation in 1986-

1987. Terminals for Online Catalog included catalog maintenance.

041 YORK UNIVERSITY. Serials Union List, COM List both inhouse. Both utilize tapes from UTLAS on university mainframe to produce fiche catalogue commercially. Cataloging Local utilizes IBM PC and university mainframe. Online Catalog called Public Query. It allows author-title-call no. searches and provides circulation information. E-Mail is campus-wide, and uses IBM PCs and PROFS. External E-Mail uses PC and ENVOY.
